Acknowledgements

The dissertation at hand is the result of four years of research I do not want to miss. I look at it proudly since it means something special to me, accompanying me for such a long time through both happy and rough times. Over these years, I let it grew with hard work and endurance so it became a piece of work I link to many experiences, which finally characterize both my dissertation and my person. Throughout those years, I have met several people, who had great influence to both my life and my dissertation, to whom I would like to express my particular thanks:

First, I want to thank the two people, who made it even possible for me to present this research output as a dissertation at this point. Both my supervisors, Prof. Dr. Jutta Günther and Prof. Dr. Tobias Kronenberg, have provided me with the feeling that my research is interesting and worth discussing. This feeling supported me to believe in what I am doing also in hard times. It felt like true and honest support I received from both of them. I feel absolutely honored to be supervised by two such professional researchers in this field.

I would also like to extend my thanks to the German Federal Ministry for Economic Affairs and Energy, represented by Dr. Rüdiger Leidner, Jochen Puth-Weißenfels and Dr. Toni Glaser, for their interest in this research field. Without their support, I would not have been able to conduct the present and earlier research regarding the economic contribution of the German health economy to this extent.

In this context, of course, my former employer, WifOR, played an essential role. Therefore, I would like to thank WifOR, represented by Dr. Dennis Ostwald and Benno Legler, for supporting this direction of research, so I was able to apply my research findings in several projects.

I will never forget the contribution of earlier project partners, Dr. Markus Schneider and Thomas Krauss from the research institute BASYS, who challenged my approaches especially in the first years of research with their critical queries. I am grateful they did so, since it further ignited my ambitions, at the same time knowing that competition and friendship can be closely allied.

This and further research regarding the German health economy could not have been accomplished to this extent without the support of the Federal Statistical Office, represented by Angela Höh. She did not only act as a

https://www.nomos-shop.de/40909

representative of the Federal Statistical Office in providing an essential database for this research, but also spent much time to patiently listen and reply to my questions, for which I am very grateful.

A particular mention is worthwhile for Johannes Többen, who acted as a trailblazer for this research. Even in times he had not yet finished his own dissertation at Rijksuniversiteit Groningen, he was always keen to supply me with helpful information, encouraged me to participate at conferences and hinted towards papers, which might be helpful in the context of my research.

Thanks to Benno, the most important person in my life during the last years. He had the challenging role of being my direct superior at WifOR, my partner and my best friend at the same time. Therefore, he had always had my interests in the context of my dissertation as my direct superior in mind, yet much more was a wonderful partner, who reassured and comforted me, providing me with sufficient space so I could focus on my dissertation. At the same time, he was my most critical friend, who incited me to deliver top performances with his support and input. I know, this time has been challenging and I thank Benno for his patience and understanding.

Finally yet importantly, thanks to my beloved family, who supported me throughout the whole time and helped me restore the necessary easiness in times of concerns and powerlessness. At the same time, they provided me with feedback in times outside opinion was necessary in order to focus on the essential further steps. It was a wonderful experience to know that I can count on your support despite quite a geographical distance between us.

3. Methodology of the Multiregional Health Account for Germany 61

3.1. Introduction 61

3.2. Motivation 64

3.3. Methodological background 68

3.3.1. Principles of the multiregional and national health account 68

3.3.2. Differences to existing methodology for the regionalization of national accounts 69

3.3.3. The multiregional context 74

3.4. Compilation methodology 79

3.4.1. Preparation of data 79

3.4.1.1. Special evaluation of supply and use tables 80

3.4.1.2. Regional accounts 80

3.4.1.3. Trade statistics 84

3.4.1.4. Changes in inventories and amount of interregional trade 89

3.4.1.5. Employees subject to social security contribution 91

3.4.1.6. Health expenditure 93

3.4.2. Alignment of the initial matrix 98

3.4.3. Basic concept of the SUT-RAS algorithm 103

3.4.4. The MR-SUT-RAS 108

3.4.5. First evaluation of the derived multiregional supply and use tables 115

3.4.6. Calculation of the satellite account from multiregional accounts 119

3.5. Concluding remarks 120

4. Validation of Direct Effects of the Health Economy 123

4.1. Introduction 123

4.2. Motivation 124

4.3. Direct effects of the health economy in 2011 125

4.3.1. The overall health economy in the German federal states in 2011 126

4.3.2. Characteristics of medication supply in German federal states in 2011 132

https://www.nomos-shop.de/40909

4.4. Direct effects of the health economy during the period 2006 to 2015 138
4.4.1. The overall health economy in the German federal states during 2006 to 2015 139
4.4.2. Characteristics of medication supply in German federal states 2006 - 2015 142
4.5. Concluding remarks 148

5. Validation of Indirect Effects of the Health Economy 150

5.1. Introduction 150

5.2. Indirect output effects of selected categories of the health economy 152
5.2.1. Indirect effects of medication manufacturing in German federal states in 2011 154
5.2.2. Indirect effects of medical products manufacturing in German federal states in 2011 159
5.2.3. Indirect effects of in- and outpatient treatment in German federal states in 2011 162
5.2.4. Indirect effects of organic food supply in German federal states in 2011 164
5.2.5. Indirect effects of health tourism in German federal states in 2011 168

5.3. Concluding remarks 171

6. A Financial Equalization Scheme to Cope with Lagging Investments in German Hospitals 172

6.1. Introduction 172

6.2. Background and challenges in the context of investments in German hospitals 174
6.2.1. Determining factors 174
6.2.1.1. Heterogeneities among federal states 174
6.2.1.2. Hospital Finance Act 176
6.2.1.3. Existing compensation mechanisms in the German health system 177
6.2.2. Current situation on the lagging investments in German hospitals 180
6.2.3. Future challenges 183

https://www.nomos-shop.de/40909

6.3. Existing approaches and introduction to the proposed approach 185
6.3.1. Existing approaches 185
6.3.2. Problem formulation 187
6.3.3. Proposed approach 188
6.4. Data base and empirical approach 188
6.4.1. Data base 188
6.4.2. Empirical approach 191
6.5. Results and discussion 194
6.5.1. Results 194
6.5.2. Discussion 198
6.6. Concluding remarks 200

7. Conclusion 202

7.1. Methodological contribution to subnational multiregional input-output analysis 202
7.2. Contribution to a thorough understanding of the health economy in German federal states 204
7.3. Contribution to the debate about hospital financing in Germany 206
